

CAMERON HARRIS

San Jose, CA | (831) 706-5679 | me@cameronharris.dev | www.cameronharris.dev | linkedin.com/in/cameron-harris-937b9617b

SUMMARY

Entry-level software engineer focused on backend systems, data pipelines, and infrastructure. Experienced with Python, PostgreSQL, REST APIs, Docker-based local environments, Linux systems, and automation through personal projects and technical operations work.

TECHNICAL SKILLS

Programming & Scripting: Python, JavaScript, Bash, PowerShell

Backend & Data: PostgreSQL, MySQL, REST APIs, ETL pipelines, Express.js, Flask

Infrastructure & Tools: Docker, Docker Compose, Linux, Git/GitHub, Postman, Proxmox, Google Cloud Platform

Frontend & Mobile: React, React Native

PROFESSIONAL EXPERIENCE

IT Technician, EOS ITS, Newark, CA

Apr 2025 - Apr 2026

- Provisioned, imaged, and configured 45+ macOS, Windows, and Linux laptops daily using Meta's internal tools.
- Created Bash and PowerShell scripts to automate battery health checks saving ~755 labor hours annually.
- Proposed scheduling improvements that increased laptop throughput by up to 25%.
- Troubleshoot imaging failures involving disk partitioning, BSoD, MDM errors, and boot loop recovery.

PROJECT EXPERIENCE

Car Auction ETL | github.com/your-username/car-auction-etl

- Built a Python CLI ETL pipeline that ingests completed vehicle auction data into a normalized PostgreSQL schema.
- Designed pipeline state handling to track listing eligibility, ingestion status, transformation status, and idempotent PostgreSQL upserts across batch workflows.
- Extended the system from one source to two by separating source-specific raw artifact handling and parsing from shared state tracking and test workflows.
- Developed unit and Docker-backed integration tests covering CLI routing, parsing, database loading, schema setup, and pipeline orchestration.

Self-Hosted Homelab | github.com/Cameron831/mochiko-homelab

- Built a Proxmox homelab to develop skills in virtualization, Linux, containerized services, and network design.
- Deployed Linux VMs/LXC containers including a self-hosted stack and reverse proxy with HTTPS exposure.
- Configured IP addressing and service routing to support practical self-hosted infrastructure experiments.

NBA Stat Tracker | github.com/Cameron831/StatTracker

- Developed a React Native mobile app with an Express.js backend to display live NBA game statistics with frequent data refreshes.
- Built REST API endpoints to move live game data between the backend and mobile frontend.
- Used MongoDB to store and retrieve game data for real-time stat views.

EDUCATION

Bachelor of Science in Software Engineering

May 2024

San Jose State University, San Jose, CA

GPA: 3.7

Relevant Coursework: Data Structures & Algorithms, Database Management, Computer Networks I & II

CompTIA A+ Certification

CompTIA, Oct 2025
